Frontend Engineer specialising in hybrid legacy/modern architectures for fintech trading platforms serving 3M+ users across 120+ countries. 7+ years shipping production features across Backbone.js / Marionette and Vue 3 microfrontend stacks, with cross-platform delivery to web and Cordova-based mobile environments. Focused on reducing tech debt through hands-on modernization and AI-augmented development workflows.

SKILLS

Core	JavaScript (ES6+), TypeScript, Vue.js (2/3), Pinia, Vuex, Vue Router
Architecture	Microfrontends (UMD), Backbone.js / Marionette, Backbone.Radio EventBus
UI & Styling	HTML5, CSS3, SCSS Modules, Tailwind CSS, BEM
Testing	Vitest, Jest
Tooling	Vite, Webpack, Git, GitLab CI/CD
Mobile	Cordova (iOS / Android)
AI & Automation	Claude Code, GitHub Copilot, Google AI CLI, n8n
Additional	REST APIs, Axios with JWT interceptors, i18n (vue-i18n, Crowdin), a11y, Figma

PROFESSIONAL EXPERIENCE

Libertex Group · Frontend Engineer

Oct 2018 – Present

- Shipped features across a hybrid trading terminal built on **Backbone.js / Marionette** (250k+ lines, ~10-year legacy codebase), working across ES5/AMD modules and **TypeScript** strict-mode code within the same production system.
- Architected a **Vue 3 / TypeScript / Pinia microfrontend** delivering AI-generated trading signals to 3M+ platform users, owning the full frontend architecture: **Pinia** stores, **Axios** with **JWT interceptors**, **SCSS Modules**, **Vite UMD bundle**, and **Crowdin i18n** integration.
- Delivered a **Vue 3 / Vuex 4 microfrontend** in JavaScript with **Tailwind CSS** and a broker-aware service layer, targeting 3 platforms (desktop web, iOS, Android); integrated both **microfrontends** with the host application via **Backbone.Radio EventBus**, covering initialization handshake, JWT lifecycle, real-time data, and cleanup protocols.
- Supported the cross-platform mobile trading app (iOS / Android) wrapped in **Cordova**, shipping features and debugging across mobile environments.
- Drove ongoing modernization of the frontend stack (**JavaScript to TypeScript**, **Vuex to Pinia**) across **Vue 3 microfrontend** apps, helping reduce **tech debt** and improve long-term maintainability.
- Integrated AI tooling (Claude Code, GitHub Copilot) as part of daily workflow for debugging, refactoring, and test generation on a complex hybrid codebase.
- Led **code reviews** and supported onboarding within an 8-person cross-functional team (2 FE, 3 BE, QA, PO), collaborating with design and product to ship features in an **Agile** environment.

Mobilsoft · UI Developer

Feb 2017 – Mar 2018

- Built responsive, accessible UIs for an **iGaming platform**, including interactive game interfaces with optimised animation performance and cross-device compatibility.
- Enhanced **Laravel**-based applications on the frontend side, improving usability and frontend reliability.
- Collaborated with QA and product teams within a cross-functional delivery workflow.

Contract Frontend Developer

Jul 2016 – Jun 2018

- Delivered frontend projects for international clients via direct contracts and **Upwork**: responsive landing pages, business websites, and a learning platform.
- Managed **end-to-end project delivery** from requirements gathering through implementation and deployment, coordinating directly with clients, backend developers, and designers.

Social Platform [NDA] · UI Developer

Dec 2015 – Jun 2016

- Built the complete frontend for a **social platform from scratch** (desktop and mobile web), covering semantic HTML, responsive layouts, and cross-browser compatibility. The platform remains in production to this day.
- Optimised **page speed and search engine indexing**, contributing to the platform's organic discoverability from launch.

EDUCATION

M.A. International Economics

Kharkiv National University of Economics

2008 – 2014
